Hi, I'm Skylar. I'm a full stack software engineer with over 2.years experience working in React and Python. I've also worked with Ruby on Rails.

Having worked at two startups, I have robust experience with feature ownership, getting my "hands" in many different aspects of our product . At Apteo, for example, I built a Shopify customer analytics module end to end, and at Dalia, I refactored our nightly jobs to scale better and to resolve memory issues.

I value agile product development and believe in collaborative work. In my previous position at Apteo, I led sprint retrospectives, authored code reviews, and collaborated with other engineers during pair programming sessions. I worked on both frontend and backend and would be happy to continue working with either.

I would love to speak with you regarding how I can assist your team. Please reach out to me at skylar.salerno@gmail.com.

Sincerely,

Skylar Salerno

Skylar Salerno

Software Engineer

(347) 403-2523 | skylar.salerno@gmail.com | linkedin.com/in/skylar-salerno | medium.com/skylar-salernos-tech-blog

I am a full-stack software engineer with about 2 and half years of experience. My strengths include a quick grasp of application logic, a love of problem solving, and asking pointed questions.

SOFTWARE ENGINEERING EXPERIENCE

Apteo Inc

Software Engineer / Jan 2020 - Nov 2021

- First non-management hire, worked closely with CTO to develop core elements of our Python and React application
- Developed reusable and customizable React components such as our sortable tables.
- Built and maintained daily Shopify data import using GraphQl and Google Bigquery
- Wrote core SQL analytic queries and surfaced the results to users
- Developed and maintained our signup and onboarding experience using React

Dalia (Maia Labs)

Software Engineer / June 2019 - Dec 2020

- Responsible for all aspects of our job search / lead generation platform including development, research, and devOps
- Wrote and maintained nightly jobs to send emails and import data
- Expanded and maintained our Ruby on Rails API
- Gave feedback on product
- Maintained styling and copy on our website

TECHNOLOGIES

Javascript, React, Python, Ruby on Rails, PostgresSQL, Shopify, Google Bigquery, Flask, CSS, API integration, Docker, Git

SOFT SKILLS

Remote collaboration, feature ownership, friendly attitude, clean code, assisting in product design, research and discovery, best practices, code review and feedback, patience with setbacks

OTHER TECH EXPERIENCE

Bernie Sanders Presidential Campaign

Data Captain during NY and NJ primaries / Spring 2016

- Trained daily walk-in volunteers on data entry
